

Growing With NOST

Many of you have been inquiring about our new products due to hit the market in November. It has been a very crazy year and a half in development. NOST decided to take on a new approach to doing suspension modifications. It is well known that 90% of all suspension upgrades are simple shim swapping. NOST offers shim swapping, slide plates, revalves, seal changes and something brand new! Now when you shell out your money you have a new option – every single top rider you talk to in any venue of motorcycle racing will tell you to ALWAYS spend your time, money and effort in suspension.

The bling-bling pipe, wheels and accessories are eye candy but do nothing to help you ride better, safer and faster. Soon, you can call up your local dealer, tell him you want a NOST suspension kit, give him your bike size, body weight and basic overview of your riding style/level and he can or NOST you a custom kit. He will receive our online installation video and your kit. You save \$100's on shipping- if your dealer gives you a deal with free labor for the installation (saving you another \$100, or so) as well as discounting the kit, then great. Now you have a completely redesigned and reconfigured suspension system (better than taking your suspension in time after time to "dial" them in just for you). Not only will you see your trick parts but you can use your old archaic

valves as paper weights, fish tank ornaments, or whatever. Your bike will be lighter, will build confidence to a level you only dreamed of before. You've seen us in all of the off-road magazines, they've raved about our suspension modifications, you may have come here because a friend sent you OR maybe you've come here because of all the great stuff said about us on forums. In '07, BIG NAMES and racers that use our suspension – whether at the track, desert, woods, or trails – will make it known they've switched to our new OD3 valves. You will witness first-hand their bikes go thru obstacles like no other. For works suspension, that cost less than many titanium exhaust systems or shiny new wheel sets – you've come to the right place!

Be ready. NOST OD3 Valves are so close to being public and seen on a world scale. Once it is released and felt, other suspension companies will be begging the phone to ring.

OD3 kits will be available for all racing dirtbikes 125cc-525cc
The kits released first will be Showa and KYB followed by WP and Ohlins
Release dates are November 20, 2006 for Showa and KYB
And December 15, 2006 for WP and Ohlins

Mini bikes 50cc-85cc will have their own 23mm cartridge. Release dates are still pending for February 15, 2007
